

ENERGY SAVINGS FOR MEDICAL FACILITIES

Energy costs at your medical facility can add up quickly, but the good news is that you can simultaneously cure high energy bills and improve patient comfort by upgrading your equipment. For example, an aging HVAC and ventilation system might run harder, use more energy, and have lower air quality which increases your energy usage. Our solution is to provide incentives for you to upgrade qualified equipment that will in return reduce your bill and increase productivity.

The TakeChargeVA Program can assist with your facility's energy efficiency projects. We provide financial incentives for new energy efficiency equipment and are your trusted energy advisor. We can even help you with the paperwork so you can focus on running your business efficiently and effectively.

HOW MEDICAL FACILITIES SAVE ENERGY:

KEY WAYS TO SAVE:

- Kitchen equipment
- Building envelope
- HVAC & controls
- Medical equipment
- Building automation systems
- Lighting & controls

AN ENERGY EFFICIENCY PROJECT COULD HELP YOU:

- Increase comfort
- Lower costs
- Improve safety
- Improve reliability

START SAVING TODAY!

We encourage you to explore further ways to reduce your energy use – and our program can help! If you have additional questions, please visit [TakeChargeVA.com/Business](https://www.TakeChargeVA.com/Business) or call 833-402-2221.
