

Energy Savings for Hotels & Lodging

Make Guests More Comfortable while Lowering Your Energy Bill

Every guest has a different idea of comfort. That's why energy bills for hotels, motels, and dormitories can fluctuate wildly and cause energy costs to skyrocket. But you can save money on energy costs and keep guests comfortable by completing an energy efficiency project through Dominion Energy's Energy Solutions for Hotel & Lodging program. Then, you'll help ensure a five-star stay for your guests and boost your bottom line.

For example, LED lights in a parking lot can increase guest visibility and safety at night, significantly reducing energy costs. Interior LEDs can also improve the look, feel, and visibility level in guest rooms and common areas. And Guest Room Energy Management Systems (GREMS) can help optimize energy use in each guest room.

The Energy Solutions for Hotels & Lodging program can assist you with a project at your facility for new energy-efficient equipment. We provide financial incentives for your project and will be your trusted energy advisor. We can even explain the paperwork, so you can focus on what matters – a superior guest experience.

KEY WAYS TO SAVE

Kitchen Equipment

Water Heaters

Laundry Machines

HVAC Controls

Lighting

Guest Room Energy
Management Systems

An Energy Efficiency Project Could Help Your Facility:

Lower Costs

Increase Comfort

Improve Safety

Enhance
Reputation
